Thesis Registration/Starting Guidelines:

1. You have to work on your thesis research area and proposal ideas before or when the semester starts. Please coordinate with potential research supervisors from Faculty of Sciences through emails and office visits/meetings.
2. You need to work proactively and come up with a thesis idea as a synopsis/proposal till the deadline set in the email.
3. An initial proposal, consisting of at least 2 pages, must be submitted by the student to potential supervisor(s) consisting of problem statement, objectives, related work, and some details/plan about the thesis to be carried out.
4. The initial proposal will be reviewed by the potential advisor(s) and may be rejected if no advisor was convinced. You have to find a thesis supervisor till the end of the deadline set by the department.
5. A student will be able to register for a thesis only when a faculty member has agreed to be his/her advisor and when the initial proposal has been accepted and signed by the advisor.
6. A student **will not be able to register the thesis without an advisor/acceptance of a proposal**. That student will then try in the next semester for thesis registration.
7. For a registered thesis, mid-term evaluation will be performed around the mid-term exams. A student must obtain satisfactory mid evaluation, otherwise his/her Thesis will have to be withdrawn in that semester.
